EDUCATION

BE CSE – Sri Eshwar College of Engineering CGPA: 7.3 (upto 5 th sem)	2023 – 2027
HSC – Senthil Public School 64%	2021 – 2023
SSLC – Indian Public School 81%	2020 – 2021

PROFESSIONAL EXPERIENCE

DATA ENGINEERING – INEU DATA

2025

I completed a data engineering internship at Sri Eshwar College of Engineering, where I gained practical experience in handling and processing large datasets. During the internship, I worked with tools such as Python, SQL, and cloud platforms to extract, transform, and load (ETL) data for various use cases. I also explored data pipeline development, data warehousing concepts, and basic automation techniques. This internship helped me understand the real-world applications of data engineering principles and enhanced my problem-solving and analytical skills in the context of large-scale data management.

PROJECTS

T20 Player Analysis dashboard: [GitHub](#)

2025

Designed a performance-driven T20 player analysis dashboard focusing on role-based insights for openers, power hitters, anchors, and finishers. Visualized batting impact through strike rate, averages, boundary percentage, and situational trends using comparative charts and interactive filters. Translated complex match data into intuitive decision-support visuals, enabling quick player selection, form evaluation, and tactical analysis for data-backed team composition.

Tools Used: PowerBI

Google Play Store Analysis Dashboard: [GitHub](#)

2026

Designed an end-to-end analytical dashboard to explore Google Play Store ecosystem trends, emphasizing app growth, category dominance, user ratings, and install behavior. Structured multi-level visualizations to reveal temporal growth patterns, content rating distribution, and category-wise performance at scale. Simplified large-volume marketplace data into clear, actionable insights supporting strategic evaluation, trend discovery, and data-driven product understanding.

Tools Used: PowerBI

Pizza Sales report : [GitHub](#)

2026

Developed a comprehensive Pizza Sales Analysis Report by collecting, cleaning, and analyzing sales data to identify key trends in customer preferences, peak sales periods, and product performance. Performed exploratory data analysis to uncover patterns in revenue distribution and best-selling pizza categories, and created visualizations using tools such as Excel/Python (Matplotlib/Plotly)/Power BI to present insights effectively. The project provided actionable recommendations to improve sales strategies, optimize inventory management, and enhance overall business decision-making.

Tools Used: PowerBI

HR Analytics Dashboard: [GitHub](#)

2026

Developed an interactive HR Analytics Dashboard using Power BI to analyze workforce data and generate insights on employee performance, attrition, recruitment, and overall organizational trends. Collected and cleaned HR datasets, performed data transformation using Power Query, and built dynamic visualizations and KPIs to track metrics such as employee turnover, department-wise performance, and hiring efficiency. Utilized DAX functions to create calculated measures and enhance data analysis. The dashboard enabled data-driven decision-making by providing actionable insights to improve employee retention, optimize recruitment strategies, and increase overall workforce productivity.
